ABSTRACT

The present study was carried out to screen and evaluate antimicrobial activity of leaf extract of *Phyllanthus Reticulatus*. Aqueous extract of leaves of *Phyllanthus Reticulatus* was tested against *Escherichia coli*, *staphylococcus aureus*, *Bacillus spp*, *pseudomonas aeruginosa* which are known to be resistant to various antibiotics. *Phyllanthus Reticulatus* materials which were used during this study were collected from Sangli district. In this study, we examined the in vitro effect of extracts of *Phyllanthus Reticulatus* on *Escherichia coli*, *staphylococcus aureus*, *Bacillus spp*, *pseudomonas aeruginosa*. Aqueous extracts were prepared from fresh *Phyllanthus Reticulatus* leaves. The susceptibility of tested bacteria to extract was determined by measuring the diameter of inhibition zones formed around wells in plates. The results showed that the *Phyllanthus Reticulatus* leaves possess antimicrobial activity.

Keywords: *Phyllanthus Reticulatus* leaves, aqueous extract, antimicrobial activity.
